We believe in a world in which you work smart and feel good. Based on research and knowledge, we create innovative solutions for your optimal work(place).

We believe that optimal work behaviour and a people-oriented workplace increase the health, safety, comfort and productivity of the "you". Within our philosophy of Work Smart - Feel Good, we want to stimulate optimal working behaviour. This includes alternating between dynamic sitting, standing and taking breaks to encourage physical and mental movement. In our people-oriented work environment, workplace design and work conduct go hand in hand.

The you-oriented work environment

Within the 'you'-oriented work environment, we put people first, with optimal work behaviour at an optimal workplace, taking into account environmental factors in the work space. We do this both in the office and in mobile work environments. In order to create a world in which you work smart and feel good, and in which we thus realise our vision and mission, we strive for excellence and expand our position as an innovation leader and knowledge partner in the market.

Don't just use any keyboard, choose the one that is best for you. A good keyboard is essential because your fingers travel up to 32 km on a keyboard in a working day (Microsoft, 2003, 7). We supply a wide range of ergonomic keyboards with the aim of preventing and alleviating long term injuries whilst improving your comfort, wellbeing and productivity.
