

The VL-FRAME02 has 2 pieces.

1.- Installs the fixed part to the ceiling supporting it on the side rails to the false ceiling or ceiling.

2.- Install the part that goes fixed to the VL-PRO with the rods included in the VL-PRO. These 4 rods need to be cutted at the requiered size of the installation.

OPTIONAL.- You can add the optional third metal bar, in case you want to make it easier the manipulation of the end of run or of the projector. Adding this piece you can put the ceiling piece in 2 parts. So in case you need to make any maintenance you can make it only removing one part of the ceiling.
